

Arinze Elenasulu

Junior Python Full Stack Developer

London, UK · elenasuluarinze@gmail.com

[linkedin.com/in/arinze-elenasulu](https://www.linkedin.com/in/arinze-elenasulu) · github.com/haxsysgit

Professional Summary

I have been writing Python since 2020 and building full-stack applications from database to UI. I built the backend for a pharmacy operations platform from scratch with FastAPI, PostgreSQL, and SQLAlchemy, owning it from feature planning through to production. On the frontend, I have built web dashboards with React and TypeScript, and my formal training covered MERN and MEAN stacks in depth. I deploy with Docker, I test everything with pytest, and I learn fast by building real things. I am based in London and looking for a junior full-stack role where I can ship software that matters and grow alongside experienced engineers.

Core Skills

Backend: Python (primary, since 2020), FastAPI, SQLAlchemy, Alembic, REST APIs, async/await, PostgreSQL, JWT auth, role-based access

Frontend: React, TypeScript, JavaScript ES6+, HTML5/CSS3, Vite, MERN stack, MEAN stack, Flutter/Dart

Infrastructure: Docker (multi-stage, docker-compose), Linux, Git/GitHub, CI/CD, structured logging

Testing: Advanced pytest (fixtures, parametrisation, integration), API test automation, React Testing Library

Additional: Java, Spring Framework, C++, C, SQL, data mining and analysis (Tableau)

Experience

Vigilis, Software Engineer

August 2024 - February 2026 · Lagos, Nigeria

Built and maintained the backend for a pharmacy operations platform handling sales, inventory, payments, and reporting across multiple locations. System used day-to-day by pharmacy staff.

- ▶ Designed the full data model and API layer (FastAPI, PostgreSQL, SQLAlchemy) with role-based access, JWT auth, and Alembic migrations.
- ▶ Sat with pharmacy staff to understand their manual processes, then turned paper workflows into software that cut daily admin time and reduced stock discrepancies.
- ▶ Built the invoice lifecycle with state-machine validation, automatic stock deduction on finalise, and reversal on cancel.
- ▶ Added structured logging, input validation, and business rule enforcement at the API boundary.
- ▶ Owned the backend end to end: feature planning, database design, deployment, monitoring, and production bug fixes.

Aptech Computer Education, Software Engineer Intern

September 2022 - August 2024 · Lagos, Nigeria

Completed the Advanced Diploma in Software Engineering (ADSE Java track), covering Linux, Python, C++, Java, Spring, Flutter/Dart, and full-stack web development across four semesters.

- ▶ Covered the full stack: Linux admin, Python, C++, C, Java, Spring Framework, EJB, Flutter/Dart, MERN and MEAN stacks.
- ▶ Built projects across multiple technology stacks, gaining practical exposure to different frameworks and architectures.
- ▶ Python became my primary language during this period and has remained so since 2020.

Bucca Hut, AI and Backend Engineer (Contract, part-time)

February 2025 - May 2025

Built a data analysis tool connecting LLM outputs and mined data insights to real operational decisions for a food business.

Selected Projects

FRAME, Typed Project Memory Format for AI Agents

Python, Markdown/YAML, Multi-Agent

github.com/haxsysgit/FRAME

Designed a portable standard that gives AI coding agents structured project context across sessions.

- ▶ Five-part memory model (Facts, Rules, Acts, Map, Expect) for agent context.
- ▶ Reduces repeated prompting, context rot, and full-repo rescans.
- ▶ Published docs and frame-python implementation on GitHub.

Haxaml, AI Agent Governance & Project Memory

[Python](#), [MCP](#), [FRAME](#)

github.com/haxsysgit/haxaml · pypi.org/project/haxaml

Governance runtime enforcing FRAME correctness, blocking AI-generated code until mechanical checks pass. Published on PyPI.

- ▶ Five-stage pipeline: Admission to Scoped Context to Agent Work to Verification to Recording.
- ▶ MCP server for AI coding tools to read/write project memory.
- ▶ Local dashboard for inspecting agent session history and project state.

Pharmax, Pharmacy Management Platform

[Python](#), [FastAPI](#), [PostgreSQL](#), [SQLAlchemy](#), [Alembic](#)

Backend for a pharmacy operations platform handling inventory, sales, invoicing, and reporting.

- ▶ Products CRUD with multi-unit pricing, full invoice lifecycle with stock deduction and reversal.
- ▶ Stock adjustments with audit trail, reorder-level tracking, role-based access with JWT.
- ▶ Comprehensive pytest suite. Sat with pharmacy staff to turn manual processes into software.

HaxJobs, Automated Job Search & Application Platform

[Python](#), [Playwright](#), [React](#), [TypeScript](#), [Hermes Agent](#)

github.com/haxsysgit/haxjobs

End-to-end automated job discovery platform. Multi-platform scraping, AI-powered evaluation, web dashboard.

- ▶ Multi-platform job discovery across 95+ companies via Lever, Ashby, Greenhouse APIs.
- ▶ Hermes-powered evaluation pipeline with 5-level application pack generation.
- ▶ React + TypeScript dashboard with real-time job status views.

Education

BSc Information Technology , Middlesex University London (Expected June 2026)

Advanced Diploma in Software Engineering (ADSE Java) , Aptech Computer Education, Lagos (September 2022 - August 2024)
