

ARINZE ELENASULU

Python Backend Engineer (Automation & AI Systems)

Phone: +44 7823 765497 | elenasuluarinze@gmail.com | London, UK | Github: <https://github.com/haxsysgit/>

PROFESSIONAL SUMMARY

Backend Python developer with experience building APIs, automation systems, and data-driven tools used in real business operations.

I focus on creating reliable systems that reduce manual work, improve accuracy, and continue working smoothly under heavy use. I have experience working with payments, backend workflows, and AI-powered features.

SKILLS

- **Web Development:** Python, Javascript, FastAPI, React, Vue.js, Django, REST APIs
- **AI and Automation:** OpenAI API, LLM integration, prompt design, workflow automation
- **Databases:** PostgreSQL, MySQL, database design, query optimization
- **Engineering Practices:** Error handling, logging, system reliability, Git, Linux
- **Infrastructure:** Docker, deployment, environment management

EXPERIENCE

Operations Systems Engineer

Justrite Superstores, Lagos | August 2022 – April 2023

- Managed and improved the store's inventory system and underlying database
- Built backend workflows to track stock movement, restocking, and reconciliation
- Reduced errors and improved processing speed through automation
- Worked with staff to turn real-world processes into reliable software system

Software and Data Engineer / IT Manager

Vigilis Pharmacy, Lagos | June 2023 – February 2026

- Designed and built a POS and pharmacy management system used in daily operations
- Developed backend systems for inventory tracking, sales transactions, payments, and reporting
- Collaborated with staff to build tools aligned with real operational needs

AI and Backend Engineer (Contract, Concurrent)

Bucca Hut | February 2025 – May 2025

- Built an AI-powered system that analyzes sales data and generates revenue improvement suggestions
- Developed data pipelines to process historical sales and product data
- Integrated the system into an existing backend without disrupting live operations
- Delivered insights that supported business decision-making

EDUCATION

BSc Information Technology

Middlesex University, London | Expected May 2026

Advanced Diploma in Software Engineering(ADSE)

Aptech Computer Education, Lagos | August 2024

PROJECTS

SuperApi – Backend Architecture & AI Governance Tool

- Developing a system that acts as a central intelligence layer for backend projects
- Guides how backend systems evolve over time, ensuring consistency and maintainability
- Integrates with AI tools while enforcing guardrails to prevent unstructured or unreliable changes
- Focused on enabling safe, structured adoption of AI in backend development

Shift Automation – Scheduling System

- Built a rule-based system to automate shift planning under defined constraints
- Reduced scheduling errors and improved fairness in shift allocation

Autopahe – Automation Platform

- Built a command-line tool that allows users to search, download, and manage anime from external websites
- Designed to handle unstable sources, ensuring downloads complete reliably even when sites change or fail
- Supports streaming and organized local management of downloaded content
